

OPERATOR TODAY · ESSENTIAL LAYER TOMORROW

A live, converting casino today — the proof engine for

Praxis7, our vision for the AI operations & creative layer of

iGaming

We run an AI-native casino (thestakehouse.io — 15,000+ games, fiat + crypto, Tobique-licensed) with a 3-person team and **zero design, CRM or data staff** — AI does those jobs. Productizing that way of operating is the vision.

THE PRAXIS7 VISION — ONE LAYER, 7 JOBS, ZERO HEADCOUNT

Praxis Build

AI CREATIVE AGENT

AI brand & hero creation, Figma → live website, promo and seasonal site updates — always on-brand, always live.

NO DESIGN TEAM

Praxis Launch

AI PAM AGENT

Turns every promo into live bonus terms, rules and player account settings — configured and launched automatically.

NO PAM ADMIN

Praxis Engage

AI CRM AGENT

Builds player journeys, missions, gamification and win-back campaigns, and pushes them straight into the CRM platform.

NO CRM STAFF

Praxis Stream

AI DATA AGENT

Captures every deposit, bet, promo and player update into a live data warehouse — always current, no manual pipelines.

NO DATA ENGINEERS

Praxis Sense

AI INSIGHT AGENT

Turns warehouse data into auto-generated dashboards and predictions — ask it questions in plain language.

NO ANALYSTS

Praxis Connect

AI INTEGRATIONS AGENT

Keeps affiliate software, the customer service bot and risk/AML monitoring synced automatically across the stack.

NO OPS TEAM

Praxis Ledger

AI FINANCE AGENT

Matches PSP settlements, fees and ledgers in real time — always audit-ready, no manual bookkeeping.

NO FINANCE OPS

Seven AI action models, one Praxis7 layer — each runs its job end-to-end so the operator never has to hire for it.

How it works — a real operational example: build a casino website fast in Figma, and Praxis7 automatically wires the integrations that matter most — data warehouse, dashboards, CRM journeys, finance reconciliation and more. Then, as you run the casino — say, launch a new promo — everything updates, connects, gets monitored and gets analysed automatically. Praxis7 sits **on top** of the operator's existing tools, replacing headcount, not systems.

TARGET B2B ECONOMICS — DOGFOOD-FIRST

- ◆ **Planned pricing:** €10k setup fee (2 instalments) + €2k / €4k / €6k per month by tier; multi-tenant cloud, isolated data per client
- ◆ Target ~25–40 B2B clients over 3 years → **€1.1–1.7M ARR at ~78% gross margin** (vs 36% single-tenant); break-even at just 5 clients
- ◆ Per-client cost only ~€975/mo + €7.5k net setup — connectors are one-time capex (~half the build), not per-client
- ◆ MVP on our own brand in ~6–9 months (~€385k build) — we build it for ourselves anyway

ROADMAP

- Y1

Scale casino distribution (Norway, Canada, Lithuania via top-DR affiliates); pursue MGA licence
- Y2

MGA live · sportsbook launch · scale acquisition
- Y3

Praxis7 commercial B2B + data-platform analytics
- Conservative casino base case: NGR €0.85M → €1.55M → €2.22M, EBITDA trending to breakeven — retention deliberately under-modelled (55% vs ~80% proven).

€6M

for 27% of the company
angel round · post-money SAFE

Cap at valuation · 20% discount · €150k lead unlocks the round.

Use of funds: acquisition marketing to scale FTDs in proven GEOs — the casino's cash flow then funds the Praxis7 build. Deployed as €2M/yr × 3: casino scale → MGA + sportsbook → Praxis7 commercial.
